Brief Abstract

Description

This measure is used to assess the proportion of patients with hepatopancreatobiliary (HPB) cancer who are discussed at a multidisciplinary team (MDT) meeting before definitive treatment.

Note from the National Quality Measures Clearinghouse: This measure is part of the Cancer Quality Performance Indicators (QPIs) collection. For more information, including a complete list of QPI measure sets, please visit the [Healthcare Improvement Scotland Web site](#).

Rationale

Evidence suggests that patients with cancer managed by a multidisciplinary team (MDT) have a better outcome. There is also evidence that the multidisciplinary management of patients increases their overall satisfaction with their care (NHS Quality Improvement Scotland, 2008).

Discussion prior to definitive treatment decisions being made provides reassurance that patients are

being managed appropriately.

Evidence for Rationale

NHS Quality Improvement Scotland. Management of core cancer services. Edinburgh (Scotland): NHS Quality Improvement Scotland; 2008 Mar. 27 p. [32 references]

NHS Scotland, Scottish Cancer Taskforce. Hepatopancreatobiliary cancer clinical quality performance indicators. Edinburgh (Scotland): Scottish Government, Healthcare Improvement Scotland; 2015 Mar. 35 p. [14 references]

Primary Health Components

Hepatopancreatobiliary (HPB) cancer; multidisciplinary team (MDT) meeting

Denominator Description

All patients with hepatopancreatobiliary (HPB) cancer (see the related "Denominator Inclusions/Exclusions" field)

Numerator Description

Number of patients with hepatopancreatobiliary (HPB) cancer discussed at the multidisciplinary team (MDT) meeting before definitive treatment (see the related "Numerator Inclusions/Exclusions" field)

Evidence Supporting the Measure

Type of Evidence Supporting the Criterion of Quality for the Measure

A clinical practice guideline or other peer-reviewed synthesis of the clinical research evidence

A formal consensus procedure, involving experts in relevant clinical, methodological, public health and organizational sciences

Additional Information Supporting Need for the Measure

Unspecified

Extent of Measure Testing

The collection of data is piloted on a small number of patient records using a paper data collection form produced by the Information Services Division (ISD). The aim is to identify any anomalies or difficulties with data collection prior to full implementation. At least one NHS board in each Regional Cancer Network participates in the pilot.

Evidence for Extent of Measure Testing

State of Use of the Measure

State of Use

Current routine use

Current Use

not defined yet

Application of the Measure in its Current Use

Measurement Setting

Ambulatory/Office-based Care

Hospital Inpatient

Hospital Outpatient

Professionals Involved in Delivery of Health Services

not defined yet

Least Aggregated Level of Services Delivery Addressed

Single Health Care Delivery or Public Health Organizations

Statement of Acceptable Minimum Sample Size

Denominator Sampling Frame

Patients associated with provider

Denominator (Index) Event or Characteristic

Clinical Condition

Denominator Time Window

not defined yet

Denominator Inclusions/Exclusions

Inclusions

All patients with hepatopancreatobiliary (HPB) cancer

Exclusions

Patients who died before first treatment

Exclusions/Exceptions

not defined yet

Numerator Inclusions/Exclusions

Inclusions

Number of patients with hepatopancreatobiliary (HPB) cancer discussed at the multidisciplinary team (MDT) meeting before definitive treatment

Note: *MDT Meeting*: A meeting which is held on a regular basis, which is made up of participants from various disciplines appropriate to the disease area, where diagnosis, management, and appropriate treatment of patients is discussed and decided.

Exclusions

Patients who died before first treatment

Numerator Search Strategy

Fixed time period or point in time

Data Source

Electronic health/medical record

Paper medical record

Type of Health State

Does not apply to this measure

Instruments Used and/or Associated with the Measure

Unspecified

Computation of the Measure

Measure Specifies Disaggregation

Does not apply to this measure

Scoring

Rate/Proportion

Interpretation of Score

Desired value is a higher score

Allowance for Patient or Population Factors

not defined yet

Standard of Comparison

not defined yet

Prescriptive Standard

Target: 95%

The tolerance within this target is designed to account for situations where patients require treatment urgently.
